MEVA ENERGY ENVIRONMENTAL POLICY

This policy states Meva Energy's contribution to environmental sustainability and the company's ambitions to proactively work towards environmental sustainability in the company, in industry and in society.

Meva Energy's driving force is to generate environmentally sustainable energy solutions for our customers by making use of local biomass residues and minimizing the negative impact on the climate.

Meva Energy's environmental ambition is prioritized and with the right resources from the board and management and involve all employees through increased knowledge and participation.

- The company works towards a responsible use of resources, minimized emissions and waste, and increased circularity with the highest sustainability awareness of the biomass feedstock used (Sustainable feedstock policy).
- The company shall increase awareness of its and its products' climate footprint, and work towards reductions.
- The company strives for an increased knowledge among its employees of environmental sustainability as an enabler for improving the sustainability performance and reach successful solutions.
- The company ensures the right competences available to meet current environmental legislation and other environmental requirements.

This policy is monitored and reviewed annually.
